RETROSMART®

Retroreflective Clear Object Sensor

RETROSMART®

High Performance Clear Object Sensor

Many of today's industrial control functions require a sensor that can provide dependable detection of position or presence of transparent containers. The RetroSmart™ will provide a single, non-chattering output for each transparent container that passes by, independent of size, shape, empty, or full.

Imagine: just point the RetroSmart™ sensor's red, narrow light beam at the reflector and push the AUTOSET button one time. Now sit back and watch the sensor flawlessly detect any size PET bottle filled with water, with no need to worry about burn-through or double signals.

When the efficiency of an entire production line depends on the performance of a photoelectric sensor, the RetroSmart™ is the smart choice.

- Robust design to improve up-time

Applications

RETROSMART®

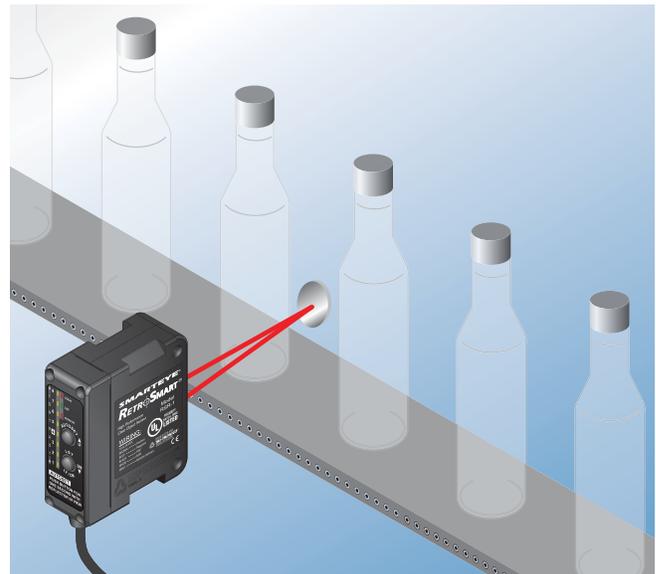

Trigger Sensor for Code Marking

- Accurate from leading edge to trailing edge.
- No false triggers
- Remove print distortion errors
- Easy setup
- Available with glass lens for ink-jet applications

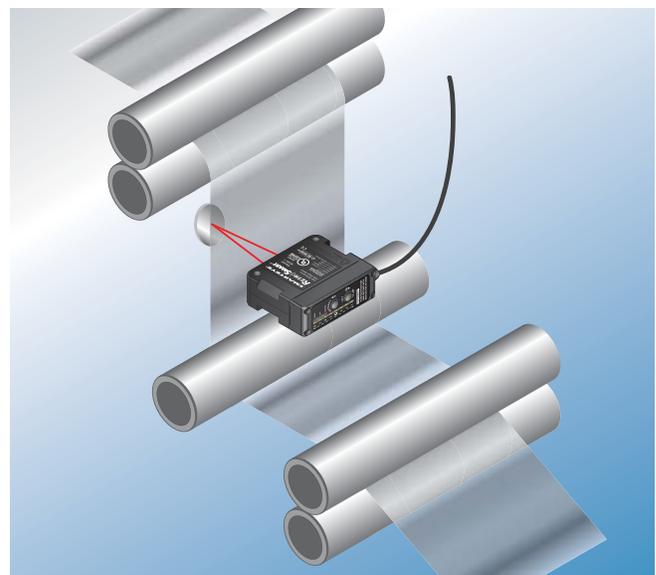

Detection of Transparent Containers

- Full or empty, no false triggers
- Solid, repeatable performance regardless of the shape, shininess, or transparency
- Works on glass, plastic, acrylic, or clear Mylar films

Clear Detection Applications

- Clear bottles, vials, food containers (clamshell boxes), syringes, liquids, etc.
- Clear web break/web splice
- Inspection systems for glass bottles, PET bottles, food products, etc.
- No false signals sensing shiny bags, foil webs, or cans

Features

AGS

AGS (Automatic Gain Select) provides automatic digital selection of amplifier gain based upon the sensing requirements.

AUTOSET ADJUSTMENT

The AUTOSET adjustment routine only requires the push of one button, one time. Even in a dynamic operating condition, with ongoing input events, all you have to do is push the button for a perfect setting.

EDR®

The digitally controlled EDR® (Enhanced Dynamic Range) circuit prevents dark state saturation and expands the operating range without reducing amplifier gain.

REMOTE AUTOSET

To remotely AUTOSET the sensor, apply a momentary contact closure from the AUTOSET input wire to negative as shown in the wiring diagram.

8 LED DUAL FUNCTION INDICATOR

Contrast indicator – provides at-a-glance performance data.

LOCK

When Lock is enabled the sensor becomes tamperproof.

Note: The remote AUTOSET is not affected by the Lock.

LST

LST (Light State Tracking) automatically adjusts the sensor up to maintain a perfect setting. When diminishing conditions occur, as in a dusty environment or slight misalignment issues, the sensor will bump up the gain to compensate for the reduced performance.

HIGH SPEED

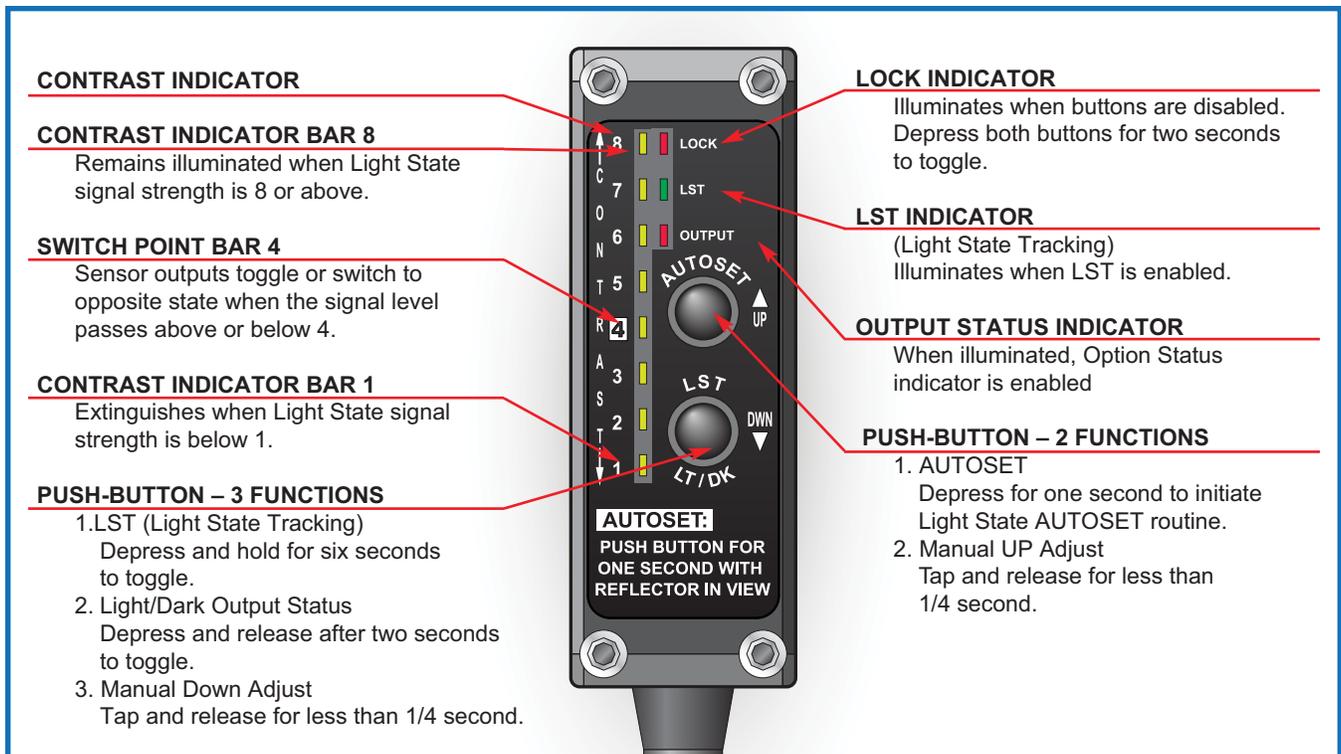

100 microsecond response time for high-speed bottling, filling, or printing applications.

CONNECTIONS

Built-in 12mm connector or 6ft cable.
